Physical Therapy Services

Treatment Approaches

The Physical Therapist will determine the best evidence-based treatment plan and which approaches will be best for your child. Some approaches your provider may suggest include:

- Theratog Fitting
- Kinesio Taping
- Neurodevelopmental Therapy (NDT)
- Adaptive Equipment
- Total Motion Release (TMR)
- Pelvic Floor Therapy
- Early Intervention

Therapeutic Services

At Children's Therapy Place, our physical therapists seek to provide clients, ages 0-18, with the necessary exercise, training, and equipment that enables them to improve functionality, increase strength and mobility, and decrease pain while providing education on how to continue making improvements after treatment has ended.

The First Visit

During the first visit, a highly trained and certified Physical Therapist will meet with you and your child to discuss concerns and symptoms. Following the interview, your provider will then conduct a thorough assessment that will determine which therapeutic treatment approaches will best benefit your child.
